

Cost structure

Introduction

The Cost Structure is one of the most important indicators characterising the costs in the organisation. The cost structure includes **all costs and expenses** that the company will incur when introducing a business model.

Purpose

The purpose of the Cost Structure Module is to support managers to identify the two main categories of cost and to calculate total costs.

Learning Outcomes

After the completion of this module the learner will be able to:

- differentiate between fixed costs and variable costs;
- define and give examples of variable costs;
- define and give examples of fixed costs;
- calculate variable costs;
- calculate fixed costs;
- optimise costs in the company.

Keywords

- cost structure
- variable costs
- fixed costs
- optimisation
- business model

Theoretical background

The Business Model Canvas		Designed for:	Designed by:	Date:	Version:																								
<p>Key Partners</p> <p>Who are our Key Partners? Who are our suppliers? Which Key Resources are we acquiring from partners? Which Key Activities do partners perform?</p> <p>MOTIVATIONS FOR PARTNERSHIPS Optimization and economy Reduction of risk and uncertainty Acquisition of particular resources and activities</p>	<p>Key Activities</p> <p>What Key Activities do our Value Propositions require? Our Distribution Channels? Customer Relationships? Revenue Streams?</p> <p>CATEGORIES Production Problem solving Platform/Network</p>	<p>Value Proposition</p> <p>What value do we deliver to the customer? Which one of our customer's problems are we helping to solve? What bundles of products and services are we offering to each Customer Segment? Which customer needs are we satisfying?</p> <p>CHARACTERISTICS Newness Performance Customization "Getting the Job Done" Design Brand/Status Price Cost reduction Risk reduction Accessibility Convenience/Usability</p>	<p>Customer Relationships</p> <p>What type of relationship does each of our Customer Segments expect us to establish and maintain with them? Which ones have we established? How are they integrated with the rest of our business model? How costly are they?</p> <p>EXAMPLES Personal assistance Dedicated personal assistance Self-service Automated services Communities Co-creation</p>	<p>Customer Segments</p> <p>For whom are we creating value? Who are our most important customers?</p> <p>Mass Market Niche Market Segmented Diversified Multi-sided platform</p>																									
<p>Key Resources</p> <p>What Key Resources do our Value Propositions require? Our Distribution Channels? Customer Relationships? Revenue Streams?</p> <p>TYPES OF RESOURCES Physical Intellectual (brand patents, copyrights, data) Human Financial</p>			<p>Channels</p> <p>Through which Channels do our Customer Segments want to be reached? How are we reaching them now? How are our Channels integrated? Which ones work best? Which ones are most cost-efficient? How are we integrating them with customer routines?</p> <p>CHANNEL PHASES 1. Awareness – How do we raise awareness about our company's products and services? 2. Evaluation – How do we help customers evaluate our organization's Value Proposition? 3. Purchase – How do we allow customers to purchase specific products and services? 4. Delivery – How do we deliver Value Proposition to customers? 5. After sales – How do we provide post-purchase customer support?</p>																										
<p>Cost Structure</p> <p>What are the most important costs inherent in our business model? Which Key Resources are most expensive? Which Key Activities are most expensive?</p> <p>IS YOUR BUSINESS MORE Cost Driven (leanest cost structure, low price proposition, maximum automation, extensive outsourcing) Value Driven (focused on value creation, premium value proposition)</p> <p>SAMPLE CHARACTERISTICS Fixed costs (salaries, rents, utilities) Variable costs Economies of scale Economies of scope</p>			<p>Revenue Streams</p> <p>For what value are our customers willing to pay? Categories of cost structure

There are two main categories of the cost structure:

- **Value-driven** cost structures, which focus on creating more value in the product itself, not necessarily producing it at the lowest possible cost. Examples include luxury fashion brands, jewellery brands or luxury hotels.
- **Cost-based** cost structures, which focus on minimising the cost of a product or service as much as possible. Examples include low-cost airlines or widely available furniture stores that allow you to assemble furniture at home.

Costs in the company - division

Total Costs (TC)

In practice, many classifications and cost allocation criteria are used. Due to the manner of reaction of costs to changes in production volume, costs can be divided into:

Fixed Costs (FC)

Variable Costs (VC)

Together, they represent the total costs (TC) incurred by the enterprise. Hence, variable costs include all types of costs in the enterprise that are not included in the fixed costs.

Information on variable and fixed costs is used for short-term decision making and variable cost accounting.

Fixed costs – definition

Fixed costs do not change with a change in production volume. This means that reducing production does not change fixed costs.

Fixed costs remain the same over a long period of time, but this does not mean that their value is always the same. The costs depend on macroeconomic conditions and therefore the costs are subject to change, but not due to the level of activity.

Fixed costs – types

Fixed costs can be divided into:

- **absolute fixed costs** – they are not subject to any changes when the production volume changes (e.g., depreciation write-offs when fixed assets are settled using the straight-line method);
- **incremental fixed costs** – their value does not change only in the size range, after which they increase, and where they stabilize again (e.g., renting a production hall, after exceeding a certain production value it is necessary to rent an additional hall).

The **examples** of fixed costs can be the following:

- administration remuneration,
- machine depreciation write-offs,
- machinery insurance,
- rent for renting a building,
- media costs.

Fixed costs – basic rule

In distinguishing whether the cost is fixed or variable, consideration should be given not to the period of time, but to whether the cost is affected by the production volume.

Fixed costs – formula

When dividing the fixed costs by the production volume, we get the average fixed cost:

$$AFV = FC/Q$$

AFC – average fixed cost, FC- fixed cost, Q – production volume

Variable Costs – definition

Variable costs are costs that the entrepreneur incurs for activities related directly to the current production level.

It is commonly assumed that variable costs change with changes in production volume.

In the definitions of variable costs, “production” should be understood broadly as “activity volume”, so variable costs are costs that change with the size of the company’s business volume.

They grow with increasing volume:

$$TC = FC + VC$$

TC –Total Cost, FC –Fixed Costs, VC – Variable Costs.

Variable Costs

The variable costs include, among others:

- cost of salaries of production workers (man-hours),
- cost of consumption of raw materials and materials,
- the cost of electricity consumption,
- storage and transport costs.

Variable Costs

The variable costs include, among others:

- cost of salaries of production workers (man-hours),
- cost of consumption of raw materials and materials,
- the cost of electricity consumption,
- storage and transport costs.

With little production, variable costs soar. However, when increasing production, these costs stabilize and increase slightly along with a further increase in production (introduction of production specialisation).

Cost Optimisation – Changing Fixed Costs into Variable Costs

Currently, in the era of a pandemic and financial crisis, changes in customer behaviour, increasing price competition and more and more difficulties in obtaining financing for operations, **control and optimisation of the cost structure are of particular importance.**

The following should be done:

- Ensure that the information obtained is reliable;
- define unequivocally the problems of the enterprise;
- analyse the key elements of the business model and how they can be changed;
- define the main cost drivers and their conditions, identify costs that can be reduced;
- apply benchmarking and other methods to assess cost-effectiveness;
- change from fixed to variable costs;
- simplify the business model;
- implement budgeting and monitoring tools.

Examples and Good practice

Fixed costs – example

Entrepreneur ABC wants to produce cups, and has a fixed cost of \$10,000 per month. If the company does not make any cups, it would still have to pay \$10,000 to rent the machine. If it produces a million cups, its fixed cost is still the same. Variable costs go up to \$ 2 million.

Response: The more fixed costs a company has, the more profit it must make in order to be able to break even, so it has to work to produce and promote its own products. This is because these costs change and occur.
